About

Software Developer since 2003, mainly working on software development projects for the enterprise segment. Vast experience in the SAP technology stack while also having a few projects being developed using different stacks. I already have experience working as a developer, a team lead and software architect. I'm an autodidact who also likes to share knowledge with my peers and with the developer community. In Brazil, I dedicated my spare time to help develop the local SAP community, organizing, speaking and attending events since 2009. I was nominated SAP Mentor and was part of the program from 2014 to 2018. I am dedicated and I learn fast.

After 15 years working in SAP consulting companies, I am looking for an opportunity outside this market segment. I'm looking for a technology company that is based on current software development best practices, cloud, devops and AI.
